CONTENTS

Preface	XI
Alec Vahanian	
Foreword	XIII
Kim Fox and Roberto Ferrari	
Guidelines overview	XV

Section I: Prevention of Cardiovascular Disease 1

1. Cardiovascular Disease Prevention in Clinical Practice	3
The European Heart Health Charter and the Guidelines on Cardiovascular Disease Prevention	3
Why develop a preventive strategy in clinical practice?	5
What are the objectives of these guidelines?	5
People who stay healthy tend to have certain characteristics	5
What are the priorities for CVD prevention in clinical practice?	5
What are the objectives of CVD prevention?	6
When do I assess cardiovascular risk?	6
Why do the Guidelines stress the assessment of total CVD risk?	6
How do I assess CVD risk quickly and easily?	7
Assessing cardiovascular risk: What are the components?	7
How do I use the SCORE charts to assess CVD risk in asymptomatic persons?	7
Risk estimation using SCORE: Qualifiers	8
10 year risk of fatal CVD in high risk regions of Europe	8
Relative risk chart	9
How do I manage the components of total CVD risk?	9
Total risk CVD management: A key message	10
Managing total cardiovascular risk	10
Why do people find it hard to change their life?	10
When to prescribe cardio-protective drugs in addition to those used to treat blood pressure, lipids and diabetes?	13
Why screen close relatives?	13
What would make the practice of CVD prevention easier?	13

Section II: Hypertension 15

1. The Management of Arterial Hypertension	17
Arterial hypertension	17
Total cardiovascular (CV) risk	18
Stratification of total CV risk	18
Clinical variables that should be used to stratify total CV risk	19
Diagnostic evaluation	20
Blood pressure (BP) measurement	20
Ambulatory and home BP measurements	20
Diagnostic evaluation: medical history and physical examination	21
Laboratory investigation	21
Searching for subclinical organ damage	22
Evidence on the benefit of antihypertensive treatment	22
Initiation of BP lowering therapy	23
Goals of treatment	23
Lifestyle changes	24
Choice of antihypertensive drugs	24
Conditions favouring the use of some antihypertensive drugs versus other	25
Contra-indications to use certain antihypertensive drugs	25
Monotherapy versus combination therapy	26
Possible combinations between some classes of antihypertensive drugs	26
Antihypertensive treatment in special groups	26

Hypertension in women	28
The metabolic syndrome	29
Resistant hypertension	29
Hypertensive emergencies	30
Treatment of associated risk factors	30
Patients' follow-up	30
How to improve compliance with blood pressure lowering therapy	31

Section III: Diabetic Heart Disease 33

1.	Diabetes, Pre-diabetes and Cardiovascular Diseases	35
	Preamble	35
	Introduction	36
	Definition, classification, and screening of diabetes and pre-diabetic glucose abnormalities	38
	Epidemiology of diabetes, IGH, and cardiovascular risk	40
	Identification of subjects at high risk for CVD or diabetes	40
	Treatment to reduce cardiovascular risk	42
	Management of cardiovascular disease	45
	Heart failure and diabetes	48
	Arrhythmias, atrial fibrillation and sudden cardiac death	48
	Peripheral and cerebrovascular disease	49
	Intensive care	50
	Health economics and diabetes	51
	Glossary of abbreviations	52
	Trials and studies acronyms	52
	References	52

Section IV: Coronary Heart Disease 53

1.	Diagnosis and Treatment of Non-ST-segment Elevation Acute Coronary Syndromes	55
	Introduction	55
	Definitions	55
	Epidemiology and natural history	56
	Pathophysiology	56
	Diagnosis and risk assessment	57
	Treatment	59
	Complications and their management	63
	Special populations and conditions	64
	Management strategies	66
2.	Acute Myocardial Infarction (AMI)	69
	Introduction	69
	Emergency care	70
	Pre-hospital or early in-hospital care	70
	Management of the later in-hospital course in the acute phase	74
3.	Stable Angina Pectoris	77
	Introduction	77
	Diagnosis and assessment	78
	Treatment	82
	Special diagnostic considerations: angina with "normal" coronary arteries	89
4.	Percutaneous Coronary Interventions (PCI)	91
	Introduction and Definitions	91
	Indications for PCI	92
	Adjunctive Medications for PCI	96
	Adjunctive Devices for PCI	97
	Drug-eluting Stents (DES)	98

Section V: Myocardial Disease 101

1.	Hypertrophic Cardiomyopathy	103
	Introduction	103
	Genetics	103
	Presentation	103
	Diagnosis	103
	Differential diagnosis	104
	Pathophysiological features	104
	Examination	104
	Treatment	104
	Medical therapy	104
	Treatment options for drug-refractory patients	105
	Drugs for “end stage”	106
	Infective endocarditis prophylaxis	106
	Pregnancy	106
	Prevention of sudden cardiac death	107
	Exercise recommendations	107
	Screening	107
	HCM in the elderly	107

Section VI: Pericardial Disease 109

1.	Management of Pericardial Diseases	111
	Introduction	111
	Acute pericarditis	112
	Pericardial effusion and cardiac tamponade	115
	Constrictive pericarditis	117
	Viral pericarditis	119
	Bacterial pericarditis	119
	Pericarditis in renal failure	120
	Autoreactive pericarditis and pericardial involvement in systemic autoimmune diseases	120
	The post-cardiac injury syndrome: postpericardiotomy syndrome	121
	Post-infarction pericarditis	121
	Traumatic pericardial effusion	121
	Haemopericardium in aortic dissection	122
	Neoplastic pericarditis	122
	Pericardial effusion in pregnancy	122
	Foetal pericardial effusion	122
	Drug- and toxin-related pericardial disease	123

Section VII: Congenital Heart Disease 125

1.	Grown Up Congenital Heart Disease	127
	Introduction & background	127
	Organisation of care	128
	Medical issues	128
	Surgical issues	137
	Psychosocial issues	137
	Specific lesions	139

2.	Neonatal Electrocardiogram	155
	Introduction	155
	Normal electrocardiogram in the newborn	155
	Abnormal electrocardiogram in the newborn	157

Section VIII: Pregnancy and Heart Disease 167

1.	Cardiovascular Disease during Pregnancy	169
	Introduction	169
	Physiological changes during pregnancy	169
	In general	170
	Congenital heart disease	170
	Marfan syndrome and other inherited conditions affecting the aorta	171
	Acquired valvular heart disease	171
	Cardiomyopathies	172
	Arrhythmias	172
	Hypertensive disorders	173

Section IX: Valvular Heart Disease 175

1.	Valvular Heart Disease	177
	Introduction	177
	Patient evaluation	178
	Indications for treatment in native valve diseases	179
	Prosthetic valves	186
	Management during non-cardiac surgery	189
	Management during pregnancy	189

Section X: Infective Endocarditis 191

1.	Infective Endocarditis	193
	Introduction	193
	Definitions	193
	Terminology	193
	Prevention of infective endocarditis	194
	Diagnosis	196
	Treatment and management	197
	Management of complications	199
	Surgery for active NVE	200
	Surgery for active PVE	200
	List of abbreviations	200

Section XI: Pulmonary Arterial Hypertension 201

1.	Pulmonary Arterial Hypertension (PAH)	203
	Definitions and classification	203
	Diagnosis of pulmonary arterial hypertension	204
	Evaluation of severity	208
	Treatment of pulmonary arterial hypertension	208
	Treatment algorithm	211
	Associated conditions	213
	Paediatric pulmonary arterial hypertension (PPAH)	215
	Glossary	216

1.	Supraventricular Arrhythmias (SVA)	219
	Introduction	219
	General evaluation and management	220
	Specific arrhythmias	221
	References	236
2.	Atrial Fibrillation (AF)	237
	Introduction	237
	Classification of AF	238
	Epidemiology and prognosis	239
	Clinical evaluation	239
	Proposed management strategies	239
	Recommendations	249
3.	Management of Syncope	257
	Evaluation of patients with syncope	257
	Diagnostic tests	259
	Treatment	263
	Situations in which ICD therapy is likely to be useful	264
	Syncope facility ("Syncope unit")	264
4.	Ventricular Arrhythmias and the Prevention of Sudden Cardiac Death	265
	Introduction	265
	Incidence of sudden cardiac death	268
	Clinical presentations of patients with ventricular arrhythmias and sudden cardiac death	268
	General evaluation of patients with documented or suspected ventricular arrhythmias	269
	Therapies for ventricular arrhythmias	271
	Acute management of specific arrhythmias	271
	Ventricular arrhythmia and sudden cardiac death related to specific pathology	274
	Ventricular arrhythmias associated with cardiomyopathies	276
	Heart failure	277
	Genetic arrhythmia syndromes	278
	Ventricular arrhythmias and sudden cardiac death related to specific populations	280
5.	Cardiac Pacing and Cardiac Resynchronization Therapy	283
	Introduction	283
	Pacing in arrhythmias	284
	Sinus node disease	284
	Atrioventricular and intraventricular conduction disturbances	284
	Recent myocardial infarction	286
	Reflex syncope	287
	Paediatrics and congenital heart diseases	288
	Cardiac transplantation	288
	Pacing for specific conditions	289
	Hypertrophic cardiomyopathy	289
	Cardiac resynchronization therapy in patients with heart failure	289

1.	Universal Definition of Myocardial Infarction	293
	Definition of myocardial infarction	293
	Cardiac biomarkers for detecting myocardial infarction	294
	Electrocardiographic detection of myocardial infarction	295

Section XIV: Pulmonary Embolism 299

1.	Diagnosis and Management of Acute Pulmonary Embolism	301
	Introduction	301
	Predisposing factors, symptoms and signs of PE	302
	Initial risk stratification	303
	Assessment of clinical probability	303
	Diagnostic assessment	304
	Comprehensive risk stratification	305
	Initial treatment	307
	Long term treatment	309
	Venous filters	309
	Specific situations	309
	Appendix	310

Section XV: Heart Failure 311

1.	Diagnosis and Treatment of Acute and Chronic Heart Failure	313
	Introduction	313
	Definition & Diagnosis	314
	Diagnostic Techniques	316
	Non-pharmacological Management	321
	Pharmacological Therapy	321
	Devices & Surgery	325
	Arrhythmias in Heart Failure	327
	Comorbidities & Special Populations	328
	Acute Heart Failure	329
	Implementation & Delivery of Care	337
	Glossary	339
	Index	345
	ESC website link	360
