# **Contents**

UNIT I		UNIT II	1
Introduction to Physiology: The Cell and General Physiology		Membrane Physiology, Nerve, and Muscle	
		CHAPTER 4	
CHAPTER 1		Transport of Substances Through Cell	
Functional Organization of the Human Body		Membranes	51
and Control of the "Internal Environment"	3	The Cell Membrane Is a Lipid Bilayer	
Cells Are the Living Units of the Body	3	With Cell Membrane Transport Proteins	51
Extracellular Fluid—the "Internal Environment"	3	Diffusion	52
lem:lem:lem:lem:lem:lem:lem:lem:lem:lem:		Active Transport of Substances Through	50
Internal Environment	4	Membranes	58
Control Systems of the Body	7	CHAPTER 5	
Summary—Automaticity of the Body	10	Membrane Potentials and Action Potentials	63
CHARTER 2		Basic Physics of Membrane Potentials	63
CHAPTER 2		Resting Membrane Potential of Neurons	65
The Cell and Its Functions	13	Neuron Action Potential	67
Organization of the Cell	13	Propagation of the Action Potential	71
Cell Structure	14	Re-Establishing Sodium and Potassium	/ 1
Comparison of the Animal Cell With Precellular Forms of Life	20	Ionic Gradients After Action Potentials	
Functional Systems of the Cell	21	are Completed—Importance of Energy	
Locomotion of Cells	26	Metabolism	72
Edecimonal of Cens		Plateau in Some Action Potentials	72
CHAPTER 3		Rhythmicity of Some Excitable Tissues—	72
Genetic Control of Protein Synthesis,		Repetitive Discharge	73
Cell Function, and Cell Reproduction	31	Special Characteristics of Signal Transmission in Nerve Trunks	74
Cell Nucleus Genes Control Protein Synthesis	31	Excitation—The Process of Eliciting the Action	/ -
Transcription—Transfer of Cell Nucleus DNA		Potential	75
Code to Cytoplasm RNA Code	33		
Translation—Formation of Proteins on the		CHAPTER 6	
Ribosomes	37	Contraction of Skeletal Muscle	79
Synthesis of Other Substances in the Cell	38	Physiological Anatomy of Skeletal Muscle	79
Control of Gene Function and Biochemical	38	General Mechanism of Muscle Contraction	81
Activity in Cells The DNA–Genetic System Controls	30	Molecular Mechanism of Muscle Contraction	82
Cell Reproduction	41	Energetics of Muscle Contraction	85
Cell Differentiation	45	Characteristics of Whole Muscle	
Apoptosis—Programmed Cell Death	45	Contraction	87
Cancer	46

CHAPTER 17		Quantitative Graphic Analysis of Cardiac	
		Failure	278
Local and Humoral Control of Tissue	205	Heart Failure With Diastolic Dysfunction	270
Blood Flow	205	and Normal Ejection Fraction	280
Local Control of Blood Flow in Response	205	•	280
to Tissue Needs	205	High-Output Cardiac Failure	200
Mechanisms of Blood Flow Control	205	CHAPTER 23	
Humoral Control of the Circulation	214		
		Heart Valves and Heart Sounds; Valvular and	202
CHAPTER 18		Congenital Heart Defects	283
Nervous Regulation of the Circulation		Heart Sounds	283
and Rapid Control of Arterial Pressure	217	Abnormal Circulatory Dynamics in Valvular	
Nervous Regulation of the Circulation	217	Heart Disease	286
Special Features of Nervous Control of		Abnormal Circulatory Dynamics in	
Arterial Pressure	226	Congenital Heart Defects	288
		Use of Extracorporeal Circulation During	
CHAPTER 19		Cardiac Surgery	291
Role of the Kidneys in Long-Term		Hypertrophy of the Heart in Valvular and	
Control of Arterial Pressure and in		Congenital Heart Disease	291
Hypertension: The Integrated System			
for Arterial Pressure Regulation	229	CHAPTER 24	
Renal–Body Fluid System for Arterial		Circulatory Shock and Its Treatment	293
Pressure Control	229	Physiological Causes of Shock	293
Role of the Renin-Angiotensin System in	_	Shock Caused by Hypovolemia—	
Arterial Pressure Control	236	Hemorrhagic Shock	294
Summary of Integrated Multifaceted		Neurogenic Shock—Increased Vascular	
Systems for Arterial Pressure Regulation	243	Capacity	299
systems for Alterial Pressure Regulation	5	Anaphylactic Shock and Histamine Shock	300
CHAPTER 20			300
Cardiac Output, Venous Return, and Their		Septic Shock	
Regulation	245	Physiology of Treatment in Shock	301
Normal Values for Cardiac	243	Circulatory Arrest	301
Output at Rest and During Activity	245		
Control of Cardiac Output by Venous	243	LIMITA	
Return—Frank-Starling Mechanism of the		UNIT V	
Heart	245	The Body Fluids and Kidneys	
Methods For Measuring Cardiac Output	256		
Methods For Measuring Cardiac Output	230	CHAPTER 25	
CHAPTER 21		Regulation of Body Fluid Compartments:	
		Extracellular and Intracellular Fluids;	
Muscle Blood Flow and Cardiac Output		Edema	305
During Exercise; the Coronary Circulation and Ischemic Heart Disease	250	Fluid Intake and Output Are Balanced During	505
	259	Steady-State Conditions	305
Blood Flow Regulation in Skeletal Muscle	250	Body Fluid Compartments	306
at Rest and During Exercise	259	Constituents of Extracellular and	300
Coronary Circulation	262	Intracellular Fluids	307
CHAPTER 33			307
CHAPTER 22		Measurement of Body Fluid Compartment	308
Cardiac Failure	271	Volumes—Indicator-Dilution Principle	308
Circulatory Dynamics in Cardiac Failure	271	Fluid Exchange and Osmotic Equilibrium  Between Intracellular and Extracellular Fluid	210
Unilateral Left Heart Failure	275		310
Low-Output Cardiac Failure—Cardiogenic		Volume and Osmolality of Extracellular and	247
Shock	275	Intracellular Fluids in Abnormal States	312
Edema in Patients With Cardiac Failure	275	Glucose and Other Solutions Administered	242
Cardiac Reserve	277	For Nutritive Purposes	313

Clinical Abnormalities of Fluid Volume Regulation: Hyponatremia and		Control of Extracellular Fluid Osmolarity and Sodium Concentration
Hypernatremia	314	Osmoreceptor-ADH Feedback System
Edema: Excess Fluid in the Tissues	316	Importance of Thirst in Controlling Extracellula
Fluids in Potential Spaces of the Body	319	Fluid Osmolarity and Sodium Concentration
CHAPTER 26		CHAPTER 30
The Urinary System: Functional Anatomy		Renal Regulation of Potassium, Calcium,
and Urine Formation by the Kidneys	321	Phosphate, and Magnesium;
Multiple Functions of the Kidneys	321	Integration of Renal Mechanisms for
Physiologic Anatomy of the Kidneys	322	Control of Blood Volume and Extracellular Fluid Volume
Micturition	324	Regulation of Extracellular Fluid Potassium
Urine Formation Results from Glomerular		Concentration and Potassium Excretion
Filtration, Tubular Reabsorption,	220	Regulation of Renal Calcium Excretion and
and Tubular Secretion	329	Extracellular Calcium Ion Concentration
CHAPTER 27		Regulation of Renal Phosphate Excretion
Glomerular Filtration, Renal Blood Flow,		Regulation of Renal Magnesium Excretion
and Their Control	331	and Extracellular Magnesium Ion
Glomerular Filtration—The First Step in		Concentration
Urine Formation	331	Integration of Renal Mechanisms for
Determinants of the Glomerular		Control of Extracellular Fluid
Filtration Rate	333	Importance of Pressure Natriuresis and Pressure Diuresis in Maintaining Body
Renal Blood Flow	336	Sodium and Fluid Balance
Physiological Control of Glomerular		Distribution of Extracellular Fluid Between
Filtration and Renal Blood Flow	337	Interstitial Spaces and Vascular System
Autoregulation of Glomerular Filtration Rate and Renal Blood Flow	338	Nervous and Hormonal Factors Increase Effectiveness of Renal–Body Fluid Feedback Control
CHAPTER 28		Integrated Responses to Changes in
Renal Tubular Reabsorption and Secretion	343	Sodium Intake
Tubular Reabsorption Is		Conditions That Cause Large Increases in
Quantitatively Large and Highly Selective	343	Blood Volume and Extracellular Fluid
Tubular Reabsorption Includes Passive and		Volume
Active Mechanisms	343	Conditions That Cause Large Increases in
Reabsorption and Secretion Along	240	Extracellular Fluid Volume With Normal or Reduced Blood Volume
Different Parts of the Nephron	349	Reduced Blood Volume
Regulation of Tubular Reabsorption Use of Clearance Methods to Quantify	355	CHAPTER 31
Kidney Function	360	Acid–Base Regulation
CHAPTER 29		Hydrogen Ion Concentration Is Precisely Regulated
Urine Concentration and Dilution;		Acids and Bases—Definitions and Meanings
Regulation of Extracellular Fluid		Defending Against Changes in H+
Osmolarity and Sodium Concentration	365	Concentration: Buffers, Lungs, and Kidneys
Kidneys Excrete Excess Water by Forming		Buffering of H <sup>+</sup> in the Body Fluids
Dilute Urine	365	Bicarbonate Buffer System
Kidneys Conserve Water by Excreting Concentrated Urine	367	Phosphate Buffer System
Countercurrent Multiplier Mechanism	507	Proteins Are Important Intracellular Buffers
Produces Hyperosmotic Renal Medullary		Respiratory Regulation of Acid–Base Balance
Interstitium	368	Renal Control of Acid–Base Balance
Loop of Henle Characteristics That Cause		Secretion of H+ and Reabsorption of
Solutes to Be Trapped in the Renal Medulla	368	HCO <sub>3</sub> - by the Renal Tubules

xiii

Combination of Excess H+ With Phosphate		CHAPTER 36	
and Ammonia Buffers In the Tubule	442	Blood Types; Transfusion; and Tissue and	
Generates "New" HCO <sub>3</sub> -	412	Organ Transplantation	471
Quantifying Renal Acid–Base Excretion	414	Antigenicity Causes Immune Reactions of Blood	471
Regulation of Renal Tubular H+ Secretion	414	O-A-B Blood Types	471
Renal Correction of Acidosis—Increased Excretion of H+ and Addition of HCO <sub>3</sub> - to		Rh Blood Types	473
the Extracellular Fluid	415	Transfusion Reactions Resulting From	474
Renal Correction of Alkalosis—Decreased		Mismatched Blood Types	474
Tubular Secretion of H+ and Increased	446	Transplantation of Tissues and Organs	4/3
Excretion of HCO <sub>3</sub> <sup>-</sup>	416	CHAPTER 37	
CHAPTER 32		Hemostasis and Blood Coagulation	477
Diuretics and Kidney Diseases	421	Hemostasis Events	477
Diuretics and Their Mechanisms		Mechanism of Blood Coagulation	479
of Action	421	Conditions That Cause Excessive Bleeding in	
Kidney Diseases	423	Humans	484
Acute Kidney Injury	423	Thromboembolic Conditions	486
Chronic Kidney Disease Is Often Associated		Anticoagulants for Clinical Use	486
With Irreversible Loss of Functional Nephrons	426	Blood Coagulation Tests	487
UNIT VI		UNIT VII	-3
Blood Cells, Immunity, and Blood Coagulation	n	Respiration	
CHAPTER 33		CHAPTER 38	
Red Blood Cells, Anemia, and Polycythemia	439	Pulmonary Ventilation	491
Red Blood Cells (Erythrocytes)	439	Mechanics of Pulmonary Ventilation	491
Anemias	446	Pulmonary Volumes and Capacities	495
Polycythemia	447	Alveolar Ventilation	497
CHAPTER 34		CHAPTER 39	
Resistance of the Body to		Pulmonary Circulation, Pulmonary Edema,	
Infection: I. Leukocytes, Granulocytes,		and Pleural Fluid	503
the Monocyte-Macrophage System,		Physiological Anatomy of the Pulmonary	
and Inflammation	449	Circulatory System	503
Leukocytes (White Blood Cells)	449	Pressures in the Pulmonary System	503
Neutrophils and Macrophages Defend Against	450	Blood Volume of the Lungs	504
Infections	450	Blood Flow Through the Lungs and its	
Monocyte-Macrophage Cell System (Reticuloendothelial System)	452	Distribution	504
Inflammation: Role of Neutrophils and	432	Effect of Hydrostatic Pressure Gradients in the	505
Macrophages	454	Lungs on Regional Pulmonary Blood Flow	
Eosinophils	456	Pulmonary Capillary Dynamics	507
Basophils	457	Fluid in the Pleural Cavity	509
Leukopenia	457	CHAPTER 40	
Leukemias	457	Principles of Gas Exchange;	
Leanerman	,	Diffusion of Oxygen and Carbon Dioxide	
CHAPTER 35		Through the Respiratory Membrane	511
Resistance of the Body to Infection: II.		Compositions of Alveolar Air and	
Immunity and Allergy	459	Atmospheric Air Are Different	513
Acquired (Adaptive) Immunity	459	Diffusion of Gases Through the Respiratory	
Allergy and Hypersensitivity	469	Membrane	515

CHAPTER 41		UNIT IX
Transport of Oxygen and Carbon Dioxide in Blood and Tissue Fluids	521	The Nervous System: A. General Principle Sensory Physiology
Transport of Oxygen From		
the Lungs to the Body Tissues	521	CHAPTER 46
Transport of CO <sub>2</sub> in Blood	528	Organization of the Nervous System,
Respiratory Exchange Ratio	530	Basic Functions of Synapses, and Neurotransmitters
CHAPTER 42		General Design of the Nervous System
Regulation of Respiration	531	Major Levels of Central Nervous
Respiratory Center	531	System Function
Chemical Control of Respiration Peripheral Chemoreceptor System—	533	Comparison of the Nervous System to
Role of Oxygen in Respiratory Control	534	a Computer
Regulation of Respiration During	334	Central Nervous System Synapses
Exercise	536	Special Characteristics of Synaptic Transmission
CHAPTER 43		CHAPTER 47
Respiratory Insufficiency—Pathophysiology, Diagnosis, Oxygen Therapy	541	Sensory Receptors, Neuronal Circuits for Processing Information
Useful Methods for Studying Respiratory Abnormalities	541	Types of Sensory Receptors
Pathophysiology of Specific Pulmonary	3	and the Stimuli They Detect
Abnormalities	543	Transduction of Sensory Stimuli Into Nerve Impulses
Hypoxia and Oxygen Therapy	546	Signal Intensity Transmission in Nerve
Hypercapnia—Excess Carbon Dioxide in the		Tracts—Spatial and Temporal Summation
Body Fluids	548	Transmission and Processing of Signals in
Artificial Respiration	548	Neuronal Pools
		Instability and Stability of Neuronal Circuits
UNIT VIII		CHAPTER 48
Aviation, Space, and Deep-Sea Diving Physiology		Somatic Sensations: I. General Organization Tactile and Position Senses
CHAPTER 44		Sensory Pathways for Transmitting Somatic Signals Into the Central Nervous System
Aviation, High Altitude, and Space		Transmission in the Dorsal Column–Medial
Physiology	553	Lemniscal System
Effects of Low Oxygen Pressure	550	Transmission of Sensory Signals in the Anterolateral Pathway
on the Body	553	Anterolateral Fatriway
CHAPTER 45		CHAPTER 49
Physiology of Deep-Sea Diving and	E61	Somatic Sensations: II. Pain, Headache, and Thermal Sensations
Other Hyperbaric Conditions  Effect of High Partial Pressures of Individual	561	Fast Pain and Slow Pain and
Gases on the Body	561	Their Qualities
Self-Contained Underwater Breathing		Pain Receptors and Their Stimulation
Apparatus (SCUBA) Diving	565	Dual Pathways for Transmission of Pain
		Signals Into the Central Nervous System
		Pain Suppression (Analgesia) System in the Brain and Spinal Cord
		Referred Pain
		Visceral Pain
		Thermal Sensations

UNIT X		Muscle Sensory Receptors—Muscle	
The Nervous System: B. The Special Senses		Spindles and Golgi Tendon Organs—and	C0C
		Their Roles in Muscle Control	686
CHAPTER 50		Flexor Reflex and the Withdrawal Reflexes	691
The Eye: I. Optics of Vision	627	Crossed Extensor Reflex Reciprocal Inhibition and Reciprocal	693
Physical Principles of Optics	627	Innervation	693
Optics of the Eye	630	Reflexes of Posture and Locomotion	693
Fluid System of the Eye—Intraocular Fluid	635		
		CHAPTER 56	
CHAPTER 51		Cortical and Brain Stem Control of Motor	
The Eye: II. Receptor and Neural Function		Function	697
of the Retina	639	Motor Cortex and Corticospinal Tract	697
Anatomy and Function of the Structural Elements of the Retina	639	Control of Motor Functions by the Brain Stem	703
Photochemistry of Vision	641	Vestibular Sensations and Maintenance of	704
Color Vision	645	Equilibrium	704
Neural Function of the Retina	646	CHAPTER 57	
Nedral Function of the Nethia	040	Cerebellum and Basal Ganglia Contributions	
CHAPTER 52		to Overall Motor Control	711
The Eye: III. Central Neurophysiology of		The Cerebellum and Its Motor Functions	711
Vision	653	The Basal Ganglia and Their Motor Functions	720
Visual Pathways	653	Integration of the Many Parts of the	
Organization and Function of the Visual Cortex	654	Total Motor Control System	724
Neuronal Patterns of Stimulation During		CHAPTER 58	
Analysis of Visual Images	656	Cerebral Cortex, Intellectual Functions	
Eye Movements and Their Control	657	of the Brain, Learning, and Memory	727
Autonomic Control of Accommodation	660	Physiologic Anatomy of the Cerebral Cortex	727
and Pupillary Aperture	660	Functions of Specific Cortical Areas	728
CHAPTER 53		The Corpus Callosum and Anterior	/20
The Sense of Hearing	663	Commissure Transfer Thoughts,	
Tympanic Membrane and the		Memories, Training, and Other Information	
Ossicular System	663	Between the Two Cerebral Hemispheres	735
Cochlea	664	Thoughts, Consciousness, and Memory	735
Central Auditory Mechanisms	669	CHAPTER 59	
CHAPTER 54		The Limbic System and the Hypothalamus—	
The Chemical Senses—Taste and Smell	675	Behavioral and Motivational Mechanisms	
Sense of Taste	675	of the Brain	741
Sense of Smell	679	Activating—Driving Systems of the Brain	741
		Limbic System	744
		The Hypothalamus, a Major Control	7.45
UNIT XI	-	Headquarters for the Limbic System	745
The Nervous System: C. Motor and Integrative Neurophysiology		Specific Functions of Other Parts of the Limbic System	749
CHAPTER 55	_ <del>_</del>	CHAPTER 60	
Spinal Cord Motor Functions; the		States of Brain Activity—Sleep, Brain Waves,	750
Cord Reflexes	685	Epilepsy, Psychoses, and Dementia Sleep	<b>753</b> 753
Organization of the Spinal Cord for Motor		sieeh	733
Functions	685		

CHAPTER 61		Gastric Secretion	811
The Autonomic Nervous System and the		Pancreatic Secretion	814
Adrenal Medulla	763	Bile Secretion by the Liver	817
General Organization of the Autonomic Nervous System	763	Secretions of the Small Intestine	820
Basic Characteristics of Sympathetic and		CHAPTER 66	
Parasympathetic Function	765	Digestion and Absorption in the	
Selective Stimulation of Target Organs by		Gastrointestinal Tract	823
Sympathetic and Parasympathetic Systems or "Mass Discharge"	773	Digestion of Various Foods by Hydrolysis	823
Systems of Mass Discharge	,,,	Basic Principles of Gastrointestinal	
CHAPTER 62		Absorption	827
Cerebral Blood Flow, Cerebrospinal		Absorption in the Small Intestine	828
Fluid, and Brain Metabolism	777	Absorption in the Large Intestine: Formation of Feces	831
Cerebral Blood Flow	777	roilliation of reces	031
Cerebrospinal Fluid System	780	CHAPTER 67	
Brain Metabolism	783	Physiology of Gastrointestinal Disorders	833
UNIT XII		UNIT XIII	5860
Gastrointestinal Physiology			
		Metabolism and Temperature Regulation	
CHAPTER 63		CHAPTER 68	
General Principles of Gastrointestinal		Metabolism of Carbohydrates and	
Function—Motility, Nervous Control,		Formation of Adenosine Triphosphate	843
and Blood Circulation	787	Tomacon or reactions in priospilate	0.5
General Principles of Gastrointestinal Motility	787	CHAPTER 69	
Neural Control of Gastrointestinal	/0/	Lipid Metabolism	853
Function—Enteric Nervous System	789	Basic Chemical Structure of Triglycerides	
Hormonal Control of Gastrointestinal Motility	791	(Neutral Fat)	853
Functional Movements in the Gastrointestinal		Transport of Lipids in the Body Fluids	853
Tract	793	CHAPTER 70	
Gastrointestinal Blood Flow—Splanchnic		Protein Metabolism	865
Circulation	794	Frotein Metabolism	000
CHAPTER 64		CHAPTER 71	
Propulsion and Mixing of Food in the		The Liver	871
Alimentary Tract	797		
Ingestion of Food	797	CHAPTER 72	
Motor Functions of the Stomach	799	Dietary Balances; Regulation of Feeding;	
Movements of the Small Intestine	802	Obesity and Starvation; Vitamins and Minerals	877
Movements of the Colon	804	Energy Intake and Output	0//
Other Autonomic Reflexes That Affect Bowel		Balanced Under Steady-State Conditions	877
Activity	806	Regulation of Food Intake and Energy Storage	879
CHAPTER 65		CHARTER TO	
Secretory Functions of the Alimentary Tract	807	CHAPTER 73	
General Principles of Alimentary Tract Secretion		Energetics and Metabolic Rate	893
Secretion of Saliva	809		

17306

xvii

CHAPTER 74		CHAPTER 79	
<b>Body Temperature Regulation</b>		Insulin, Glucagon, and Diabetes Mellitus	973
and Fever	901	Insulin and Its Metabolic Effects	973
Normal Body Temperatures	901	Glucagon and Its Functions	982
Body Temperature Is Controlled by Balancing Heat Production and Heat Loss	901	Summary of Blood Glucose Regulation	983
Regulation of Body Temperature—Role of the		CHAPTER 80	
Hypothalamus	905	Parathyroid Hormone, Calcitonin,	
Abnormalities of Body Temperature		Calcium and Phosphate Metabolism,	
Regulation	909	Vitamin D, Bone, and Teeth	991
		Overview of Calcium and	
UNIT XIV		Phosphate Regulation in Extracellular Fluid and Plasma	991
Endocrinology and Reproduction		Bone and Its Relationship to Extracellular	551
33		Calcium and Phosphate	993
CHAPTER 75		Vitamin D	997
Introduction to Endocrinology	915	Parathyroid Hormone	999
Coordination of Body		Calcitonin	1002
Functions by Chemical Messengers	915	Summary of Control of Calcium Ion	
Chemical Structure and Synthesis of Hormones	915	Concentration	1003
Hormone Secretion, Transport, and		Physiology of the Teeth	1006
Clearance From the Blood	919	CHAPTER 04	
Mechanisms of Action of Hormones	920	CHAPTER 81	
CHAPTER 76		Reproductive and Hormonal Functions of the Male (and Function	
		of the Pineal Gland)	1011
Pituitary Hormones and Their Control by the Hypothalamus	929	Spermatogenesis	1011
Pituitary Gland and Its Relation to the	323	Male Sexual Act	1016
Hypothalamus	929	Testosterone and Other Male Sex Hormones	1018
Hypothalamus Controls Pituitary Secretion	930	restosterone una ouner maie sex monnents	
Physiological Functions of Growth Hormone	932	CHAPTER 82	
Posterior Pituitary Gland and Its Relation		Female Physiology Before Pregnancy and	
to the Hypothalamus	938	Female Hormones	1027
CHAPTER 77		Physiologic Anatomy	4027
	044	of the Female Sexual Organs	1027
Thyroid Metabolic Hormones Synthesis and Secretion of the	941	Oogenesis and Follicular Development in the Ovaries	1027
Thyroid Metabolic Hormones	941	Female Hormonal System	1027
Physiological Functions of the Thyroid		Monthly Ovarian Cycle and Function of	1027
Hormones	944	Gonadotropic Hormones	1028
Regulation of Thyroid Hormone Secretion	948	Functions of Ovarian Hormones—	
		Estradiol and Progesterone	1032
CHAPTER 78		Regulation of Female Monthly Rhythm—	
Adrenocortical Hormones	955	Interplay Between Ovarian and Hypothalamic-Pituitary Hormones	1037
Corticosteroids: Mineralocorticoids, Glucocorticoids, and Androgens	955	Female Sexual Act	1041
Synthesis and Secretion of Adrenocortical	933	remaie Sexual Acc	1041
Hormones	955	CHAPTER 83	
Functions of Mineralocorticoids—		Pregnancy and Lactation	1045
Aldosterone	958	Maturation and Fertilization of the Ovum	1045
Functions of Glucocorticoids	962	Early Nutrition of the Embryo	1047

## Video and Audio Contents

**CHAPTER 2** 

The Cell and Its Functions

Video 2-1 Endocytosis

**CHAPTER 5** 

**Membrane Potentials and Action Potentials** 

Video 5-1 Action Potential

CHAPTER 6

**Contraction of Skeletal Muscle** 

Video 6-1 The Cross Bridge Cycle

**CHAPTER 9** 

Cardiac Muscle; The Heart as a Pump and

**Function of the Heart Valves** 

Video 9-1 The Cardiac Cycle

**CHAPTER 23** 

Heart Valves and Heart Sounds; Valvular and

**Congenital Heart Defects** 

Audio 23-1 Normal Heart Sound Audio 23-2 Aortic Stenosis

Audio 23-3 Aortic Regurgitation

Audio 23-4 Mitral Regurgitation

Audio 23-5 Mitral Stenosis

**CHAPTER 29** 

Urine Concentration and Dilution; Regulation of Extracellular Fluid Osmolarity and Sodium

Concentration

Video 29-1 The Countercurrent Multiplier

**CHAPTER 34** 

Resistance of the Body to Infection: I. Leukocytes, Granulocytes, the Monocyte-Macrophage System,

and Inflammation

Video 34-1 Chemotaxis

**CHAPTER 38** 

**Pulmonary Ventilation** 

Video 38-1 Mechanics of Pulmonary Ventilation

**CHAPTER 46** 

Organization of the Nervous System, Basic **Functions of Synapses, and Neurotransmitters** 

Video 46-1 Chemical Synaptic Transmission

Video 46-2 Neurotransmission

**CHAPTER 48** 

Somatic Sensations: I. General Organization, **Tactile and Position Senses** 

Video 48-1 Fine Touch

Video 48-2 Pain Pathways

**CHAPTER 50** 

The Eye: I. Optics of Vision

Video 50-1 Eye-Lens Accommodation

CHAPTER 55

Spinal Cord Motor Functions; the Cord Reflexes

Video 55-1 Muscle Spindle

Video 55-2 Patella Reflex

**CHAPTER 63** 

General Principles of Gastrointestinal Function—

Motility, Nervous Control, and Blood Circulation

Video 63-1 Peristalsis

**CHAPTER 82** 

Female Physiology Before Pregnancy and Female

**Hormones** 

Video 82-1 The Menstrual Cycle
