GOODMAN'S BASIC MEDICAL ENDOCRINOLOGY

FIFTH EDITION

ELIZABETH H. HOLT

Associate Professor of Medicine, Endocrinology, Yale School of Medicine, New Haven, CT, United States

BEATRICE LUPSA

Assistant Professor of Medicine, Endocrinology, Yale School of Medicine, New Haven, CT, United States

GRACE S. LEE

Assistant Professor of Medicine, Endocrinology, Yale School of Medicine, New Haven, CT, United States

Endocrinologist, VA CT Healthcare System, West Haven, CT, United States

HANAN BASSYOUNI

*Clinical Associate Professor, Cumming School of Medicine; Faculty of Medicine, Department of Medicine;
Section of Endocrinology and Metabolism, University of Calgary, Calgary, AB, Canada*

HARRY E. PEERY

*The Karl Riabowol Laboratory, Arnie Charbonneau Cancer Research Institute and Department of Biochemistry and Molecular Biology,
Cumming School of Medicine, University of Calgary, Calgary, AB, Canada*

*Program in Pharmaceutical Bioengineering, Department of Bioengineering, School of Medicine and College of Engineering,
University of Washington, Seattle, WA, United States*

*Founding Director and Research Director, The Anti-NMDA Receptor Encephalitis Foundation, Inc., Ottawa,
Ontario, Canada*

Contents

Preface	xiii		
1. Introduction	1		
Case study: gigantism	1		
Types of chemical messengers	3		
Boxed Area: Biosynthesis of hormones	6		
Storage and release of hormones	14		
Boxed Area: Release of hormones	16		
Hormone transportation and fate	17		
Hormone specificity	19		
Hormone receptors	19		
Characteristics of receptors	19		
Hormonal actions mediated by intracellular receptors	20		
Hormonal actions mediated by surface receptors	22		
The G-protein-coupled receptors	22		
Desensitization and downregulation of			
G-protein-coupled receptors	25		
The second messenger concept	25		
Boxed Area: Classes of G-protein	25		
Second messengers: the cyclic 3',5' adenosine monophosphate system	28		
Second messengers: the calcium-calmodulin system	28		
Second messengers: the diacylglycerol and IP3 system	29		
Second messengers: cyclic guanosine 3',5'-monophosphate	31		
Receptors that signal through tyrosine kinase	31		
Boxed Area: Tyrosine kinases	33		
Regulation of hormone secretion	35		
Negative feedback	36		
Positive feedback	37		
Feed forward	38		
Measurement of hormones	38		
Immunoassays	39		
Radioimmunoassay	39		
Immunometric assays	40		
Hormone levels in blood	40		
Summary	41		
Suggested reading	41		
2. Pituitary gland	43		
Case study: pituitary mass	43		
Boxed Area: Case 2. (Summary only)	46		
Pituitary gland	48		
		Morphology	48
		Embryology	48
		Histology	48
		Blood supply	51
		The anterior lobe (adenohypophysis)	53
		Physiology	53
		Glycoprotein hormones	54
		Growth hormone and prolactin	55
		Adrenocorticotropin family	57
		Development of the anterior pituitary gland	58
		Regulation of anterior pituitary function	58
		Hypophysiotropic hormones	60
		The circumventricular organs	60
		Hypothalamic hormones	62
		Gonadotropin-releasing hormone	62
		Control of growth hormone secretion	62
		Corticotropin-releasing hormone	63
		Dopamine and control of prolactin secretion	63
		Secretion and actions of hypophysiotropic hormones	63
		Feedback control of anterior pituitary function	64
		Physiology of the posterior pituitary	66
		Regulation of posterior pituitary function	70
		Summary	72
		Suggested readings	72
		3. Thyroid gland	75
		Case study: Graves disease	75
		In the clinic: hyperthyroidism	76
		Introduction	78
		Morphology	78
		Thyroid hormones	80
		Biosynthesis	81
		Iodine trapping	82
		Thyroglobulin synthesis	82
		Incorporation of iodine	82
		Coupling	84
		Hormone storage	85
		Secretion	85
		Control of thyroid function	85
		Effects of thyroid-stimulating hormone	85
		Boxed Area: Under the microscope—information in greater detail	88
		Autoregulation of thyroid hormone synthesis	88
		Thyroid hormones in blood	88
		Metabolism of thyroid hormones	89

Boxed Area: Under the microscope—in depth information	90	5. Principles of hormone integration	145
Physiological effects of thyroid hormones	92	Case study: Abraham Lincoln: did he have MEN3?	145
Growth and maturation	92	In the clinic: multiple endocrine neoplasia 3	148
Skeletal system	92	Boxed Area: Medullary thyroid carcinoma progression	150
Central nervous system	92	Boxed Area: At the molecular level (boxed material for additional information)	151
Autonomic nervous system	93	Introduction	152
Cardiovascular system	93	Integration of hormonal signals at the cellular and molecular level	152
Metabolism	93	Augmentation, antagonism, and synergy	152
Oxidative metabolism and thermogenesis	93	Permissiveness	153
Carbohydrate metabolism	95	Maintaining signal fidelity	153
Lipid metabolism	96	Modulation of responding systems	154
Nitrogen metabolism	96	Sensitivity and capacity	155
Regulation of thyroid hormone secretion	96	Spare receptors	156
Mechanism of thyroid hormone action	98	Hormonal integration at the whole-body level	158
Summary	99	Redundancy	158
Suggested readings	99	Reinforcement	159
		Push–pull mechanisms	160
		Summary	161
		Suggested readings	161
4. The adrenal glands	101		
Case study: Cushing syndrome	101	6. Hormones of the gastrointestinal tract	163
In the clinic: Cushing syndrome	103	Case study: Zollinger-Ellison syndrome (ZES)	163
Adrenal glands	107	In the clinic: Zollinger-Ellison syndrome	164
Anatomy and histology	108	Signs and symptoms	165
Adrenal cortex	108	Diagnosis	166
Adrenocortical hormones	109	Management	166
Control of adrenal cortical hormone synthesis	112	Prognosis	167
Control of aldosterone synthesis	117	Gastrointestinal Hormones	168
Adrenal steroid hormones in blood	118	Introduction	168
Postsecretory metabolism of adrenal cortical hormones	120	Functional Anatomy of the Gastrointestinal Tract	169
Physiology of the mineralocorticoids	121	The Stomach	170
Effects of aldosterone on the kidney	123	The Duodenum and Pancreas	173
Regulation of aldosterone secretion	125	Additional hormones	174
Physiology of the glucocorticoids	126	Boxed Area: At the molecular level (boxed material for additional information)	177
Effects on energy metabolism	126	The gastrin/cholecystokinin family	177
Effects on water balance	128	Physiological actions of gastrin	178
Effects on lung development	128	Regulation of gastrin secretion	180
Glucocorticoids and responses to injury	128	Somatostatin	181
Antiinflammatory effects	129	Cholecystokinin	182
Glucocorticoids and cytokines	130	Physiological actions of cholecystokinin	182
Glucocorticoids and the release of other inflammatory mediators	132	Pancreatic enzyme secretion	182
Glucocorticoids and the immune response	132	Gall bladder contraction	183
Maintenance of vascular responsiveness to catecholamines	133	Other effects of cholecystokinin	184
Adrenal cortical function during stress	134	Regulation of cholecystokinin secretion	185
Mechanism of action of glucocorticoids	134	The secretin/glucagon superfamily	186
Regulation of glucocorticoid secretion	135	Secretin	187
Adrenal medulla	138	Cellular effects of secretin	187
Biosynthesis of medullary catecholamines	139	Secretin/cholecystokinin/acetylcholine interactions	188
Storage, release, and metabolism of medullary hormones	140	Other effects of secretin	188
Physiological actions of medullary hormones	141	Regulation of secretin secretion	189
Regulation of adrenal medullary function	142	GIP (Glucose-dependent insulinotropic polypeptide/gastric inhibitory peptide)	189
Summary	143	Regulation of GIP secretion	191
Suggested readings	143		

Glucagon-like peptides 1 and 2	191	8. Hormonal regulation of fuel metabolism	239
Physiological actions of glucagon-like peptide 1	193	Case study: lipodystrophy	239
Effects on the pancreas	193	In the clinic: lipodystrophy	240
Effects on the stomach	193	Hormonal regulation of fuel metabolism	242
Effects on the brain	193	General features of energy metabolism	242
Ileal brake mechanism	194	Body fuels	242
Regulation of glucagon-like peptide 1 secretion	194	Glucose	242
Physiological actions of glucagon-like peptide 2	194	Glycogen	243
The pancreatic polypeptide family	194	Protein	243
Physiological effects of the pancreatic polypeptide hormone family	195	Fat	244
Neurotensin	196	Problems inherent in the use of glucose and fat as metabolic fuels	244
The motilin/ghrelin family	196	Fuel consumption	245
Physiological actions of motilin	197	The glucose fatty acid cycle	246
Discovery of ghrelin	198	Adenosine monophosphate—activated kinase (AMPK)	249
Physiological actions of ghrelin	198	Overall regulation of blood glucose concentration	251
Concluding comments	201	Short-term regulation	252
Summary	202	Long-term regulation	252
Suggested readings	202	Integrated actions of metabolic hormones	252
		Adipose tissue	253
		Muscle	253
		Liver	254
		Pancreatic islets	255
7. The pancreatic islets	203	Regulation of metabolism during feeding and fasting	255
Case study: type 1 diabetes mellitus	203	Postprandial period	255
In the clinic: diabetes mellitus	204	Postabsorptive period	256
The pancreatic islets	205	Fasting	257
Morphology of the endocrine pancreas	206	Hormonal interactions during exercise	259
Glucagon	208	Short-term maximal effort	260
Biosynthesis, secretion, and metabolism	208	Sustained aerobic exercise	260
Physiological actions of glucagon	208	Long-term regulation of fuel storage	261
Glucose production	209	Adipogenesis	262
Glycogenolysis	210	Hypothalamic control of appetite and food intake	263
Gluconeogenesis	211	Peripheral input to hypothalamic feeding and satiety neurons	266
Lipogenesis and ketogenesis	213	Adiposity signals	266
Ureagenesis	214	Leptin	266
Regulation of glucagon secretion	215	Insulin as an adiposity signal	267
Insulin	216	Adipokines	268
Biosynthesis, secretion, and metabolism	216	Satiety signals	270
Physiological actions of Insulin	218	Perspective	271
Effects of insulin deficiency	218	Summary	271
Effects of insulin excess	219	Suggested readings	271
Effects on glucose metabolism	219		
Effects on adipose tissue	220	9. Regulation of salt and water balance	273
Effects on muscle	221	Case study: primary aldosteronism (Conn syndrome)	273
Effects on liver	226	In the clinic: Conn syndrome	277
Mechanism of insulin action	230	Signs and symptoms	277
Regulation of insulin secretion	230	Diagnosis	278
Glucose	231	Management	278
Other circulating metabolites	231	Prognosis	278
Hormonal and neural control	233	Introduction	278
Cellular events	233	General considerations	278
Effects of other hormones and neurotransmitters	236	Salt and water balance	279
Somatostatin	236	Antidiuretic hormone	284
Summary	237	Antidiuretic effect	284
Suggested readings	237	Effects on blood pressure	286
		Regulation of antidiuretic hormone secretion	286

Plasma osmolality	286	Vitamin D hormone	326
Blood volume	288	Synthesis and metabolism	327
Diseases	288	Physiological actions of 1,25-(OH) ₂ D ₃	327
The renin—angiotensin—aldosterone system	289	Actions on intestine	327
Actions of angiotensin II	290	Actions on bone	328
Actions on the adrenal cortex	290	Actions on kidney	328
Actions on the kidney	291	Actions on the parathyroid glands	328
Cardiovascular effects	291	Regulation of 1,25-(OH) ₂ D ₃ production	329
Central nervous system effects	291	Calcium regulation of plasma calcium concentrations	329
Regulation of the renin—angiotensin—aldosterone system	291	Integrated actions of calcitropic hormones	330
Atrial natriuretic factor	292	Response to a hypocalcemic challenge	330
Physiological actions	293	Response to a hypercalcemic challenge	331
Cardiovascular actions	293	Other hormones that influence calcium balance	332
Renal actions	295	Summary	333
Effects on aldosterone secretion	296	References	333
Other effects	296	Suggested readings	333
Regulation of atrial natriuretic factor secretion	296		
Integrated compensatory responses to changes in salt and water balance	296	11. Hormonal control of growth	335
Hemorrhage	296	Case study: suprasellar teratoma	335
Response of the renin angiotensin system	297	In the clinic: sellar tumors	340
Response of the antidiuretic hormone system	298	Hormonal control of growth	348
Response of aldosterone	299	The pituitary and growth	349
Response of atrial natriuretic factor	300	Boxed Information: At the molecular level—boxed material for additional information	351
Dehydration	300	Growth hormone secretion	363
Salt loading and depletion	300	Effects of stress	363
Summary	301	Effects of age	363
Suggested reading	301	Regulation of growth hormone secretion	363
		Actions of growth-hormone-releasing hormone, somatostatin, IGF-1, and ghrelin on the somatotrope	367
10. Hormonal regulation of calcium balance	303	Actions of growth hormone on skeletal structure	370
Case study: primary hyperparathyroidism	303	Effect of thyroid hormone on growth	371
In the clinic: primary hyperparathyroidism	303	Dependence of growth hormone synthesis and secretion on T ₃	372
Hormonal regulation of calcium balance	305	Importance of T ₃ for expression of growth hormone actions	372
General features of calcium balance	305	Effect of insulin on growth	373
Distribution of calcium in the body	305	Effect of gonadal hormones on growth	375
Calcium balance	306	Effects of estrogens on epiphyseal growth plates	375
Intestinal absorption	306	Effects on growth hormone secretion and action	376
Bone	306	Effects of androgens	377
Kidney	311	Effect of glucocorticoids on growth	377
Phosphorus balance	312	Summary	379
Parathyroid glands and parathyroid hormone	312	Suggested reading	379
Biosynthesis, storage, and secretion of parathyroid hormone	315		
Mechanisms of parathyroid hormone actions	319	12. Hormonal control of reproduction in the male	381
Physiological actions of parathyroid hormone	319	Case study: a case of infertility	381
Actions on bone	319	In the clinic: disorders of sexual development in the male	382
Actions on kidney	320	Boxed Information: At the molecular level—for a Morein-depth understanding—disorders of sexual development in the male	385
Effects on intestinal absorption	322	Introduction	397
Parathyroid hormone fragments	322	Sexual differentiation	399
Parathyroid hormone—related peptide	322	Development of internal reproductive ducts and their derivatives	401
Regulation of parathyroid hormone secretion	323	Development of the external genitalia	403
Calcitonin	324	Testes	403
Cells of origin	324	Morphology of the testes	404
Biosynthesis, secretion, and metabolism	325	Leydig cells, seminiferous tubules, and Sertoli cells	404
Physiological actions of calcitonin	325		
Actions on bone	325		
Actions on kidney	326		
Regulation of secretion	326		

Leydig cells	404	Regulation of the reproductive cycle	467
Seminiferous tubules	409	Regulation of follicle-stimulating hormone and	
Sertoli cells	411	luteinizing hormone secretion	468
Male reproductive tract	414	Negative feedback aspects	468
Regulation of testicular function I	416	Selection of the dominant follicle	469
Testosterone	416	Positive feedback aspects	469
Secretion and metabolism	416	Neural control of gonadotropin secretion	470
Mechanism of action	419	Sites of feedback control	470
Effects on the male genital tract	420	Timing of reproductive cycles	472
Effects on secondary sexual characteristics	421	Summary	472
Male reproductive development	421	Suggested readings	472
Prenatal and postnatal	422		
Puberty	422		
Anomalies of sexual differentiation	423	14. Hormonal control of pregnancy and lactation	473
Regulation of testicular function II	424	Case study: pregnancy and Crohn disease	473
Gonadotropin-releasing hormone and the		In the clinic: Crohn disease	475
hypothalamic pulse generator	424	Hormonal control of pregnancy and lactation	487
Negative feedback regulators	427	Introduction	487
Inhibin and testosterone	427	Fertilization and implantation	488
Summary	428	Gamete transport	488
Oxytocin in the male	428	Role of the uterine tubes	489
Effect of oxytocin on male reproduction	428	Implantation and the formation of the placenta	492
Effect of oxytocin on cell division	428	The placenta	495
Effect on brain	429	Placental hormones	496
Suggested reading	431	Human chorionic gonadotropin	497
		Human chorionic somatomammotropin	500
13. Hormonal control of reproduction in the		Progesterone	502
female: the menstrual cycle	433	Estrogens	502
Case study and in the clinic: secondary amenorrhea	433	The role of the fetal adrenal cortex	503
Hormonal control of reproduction in the female:		The role of progesterone and estrogens in maintaining	
the menstrual cycle	434	pregnancy	504
Ovaries	435	Maternal adaptations to pregnancy	505
Folliculogenesis	437	Cardiovascular adaptations	506
Uterine tubes and uterus	447	Renal adaptations	509
Ovarian hormones	449	Osmoregulation and thirst	511
Estrogens	449	Respiratory adjustments	512
Progesterone	450	Gas exchange	512
Inhibin	451	Metabolic adjustments	513
Relaxin	451	Calcium balance	514
Control of ovarian function	452	Parturition	515
Effects of follicle-stimulating hormone and luteinizing		The role of corticotropin-releasing hormone	516
hormone on the developing follicle	453	The role of oxytocin	518
Estradiol production	453	Lactation	519
Follicular development	458	Growth and development of the mammary glands	519
Cellular actions of follicle-stimulating hormone and		Milk production	519
luteinizing hormone	458	Lactation and maternal calcium balance	521
Effects on ovulation	459	Mechanism of prolactin action	522
Effects on corpus luteum formation	461	Neuroendocrine mechanisms	522
Effects on oocyte maturation	462	Milk let-down reflex	522
Effects on corpus luteal function	462	Cellular actions of oxytocin	523
Effects on ovarian blood flow	462	Control of prolactin secretion	524
Physiological actions of ovarian steroid hormones	462	Cellular regulation of prolactin secretion	525
Effects on the reproductive tract	463	Prolactin in blood	525
Menstruation	463	Lactation and resumption of ovarian cycles	526
Effects on the mammary glands	464	Summary	527
Other effects of ovarian hormones	464	Suggested readings	527
Mechanism of action	466	Index	529
